ABOUT ME

From the moment I first learned to code and ran a simple "Hello World" in my console, I knew I was hooked on software development. For me, software engineering has never been "just a 9-5 job." It has provided an environment where I can challenge myself, apply my problem-solving skills, and continuously learn and improve to create awesome, high-quality software. What began with a simple "Hello World" has evolved into a full-fledged passion that only gets more exciting as the years go by.

Below, you'll find my professional experience showcasing my skills and general background in software development.

WORK EXPERIENCE

Front End Developer

TDCX Malaysia | December 2021 - Current

- Developed user interfaces utilizing HTML, CSS, JavaScript, React, and Tailwind CSS for optimized styling and performance.
- Integrated RESTful APIs to ensure seamless communication between frontend and backend systems.
- Applied SEO best practices to enhance organic traffic and user engagement.
- Demonstrated expertise in CMS platforms, including WordPress, Shopify, Magento, Drupal, and Shopbase.
- Promoted in August 2022 to a new role within the Front-end team due to high performance, with additional responsibilities including code review, code testing, presentations, and project management.

Article Summarizer (React Web App)

- By leveraging the power of AI, this tool helps users summarize the content of website links.

Full-stack Ecommerce (Django Web App)

- The website allows users to log in, view products, and make purchases directly on the platform.
